Subject	Subject A: The packaging trade-off at {{company_name}} Subject B: Is damaged packaging affecting how the {{company_name}} brand is perceived?

Good day {{first_name}},

I'm writing about a trade-off furniture manufacturers know well.

Either you over-dimension the carton and lose margin, or you save on board weight and accept that the packaging will tear in transit or in the customer's hands.

In both cases the brand image suffers.

We work with furniture manufacturers on paper components that give the strength of high-grade carton without its cost.

Is this the right address, or is it better to direct the enquiry to the packaging department at {{company_name}}?

Kind regards,

Subject	Subject A: Last message from me Subject B: Handles that prevent cartons tearing

Good day {{first_name}},

Last message from me on this matter.

We help furniture manufacturers reinforce corrugated board and make parcels easier for customers to carry, while preserving the environmental benefits of fully paper-based packaging.

Eco-Sidewinder is tested above 60 kg per handle, made from FSC-certified paper or 100% recycled fibre, plastic-free, and recyclable together with the carton. We can also print it with the {{company_name}} logo.

If the topic isn't relevant, please let me know briefly - I won't write again.

Subject	Subject A: Packaging at {{company_name}} Subject B: Damaged packaging and {{company_name}}'s brand image

Hi {{first_name}},

Quick question about packaging.

Furniture brands are usually stuck: either you over-spec the board and it costs margin, or you save on board weight and accept the box tears in transit or at the customer.

Both bad for the brand.

We work with furniture brands on paper components that give the strength of heavy board, without the price.

Are you the right person for this, or do I need {{company_name}}'s packaging team?

Best regards,

Subject	Subject A: Good products, good handles Subject B: Less transport damage with {{hero_product}}

Hi {{first_name}},

We make paper components that reinforce boxes and make them easier to carry.

The Eco-Sidewinder carries a good 60 kg per handle, is woven paper webbing with a reinforcing plate, and just goes in the paper recycling - the customer doesn't have to separate anything.

Interesting for {{company_name}}?

Best regards,

Subject	Subject A: Does the unboxing fit the product? Subject B: Small adjustment, big difference when unpacking

Hi {{first_name}},

Just coming back to my previous email.

Furniture brands put a lot of work into what's in the box. If the box arrives dented, re-taped and with torn handles, that is what the customer sees first.

Corrugated remains preferred for sustainability and appearance, but in practice it tears in transit or the last mile.

That's what we work on at Item Products: paper components that reinforce the board so products like {{hero_product}} arrive more neatly.

If this isn't your thing, who should I have at {{company_name}}?

Subject	Subject A: O desembalamento está à altura do produto? Subject B: Uma pequena mudança, uma grande diferença no desembalamento

Bom dia, {{first_name}},

Volto ao tema da minha mensagem anterior.

Os fabricantes de mobiliário dão grande importância ao que está dentro da caixa. Mas se a encomenda chegar amolgada, com fita reaplicada, com as pegas rasgadas - é isso que o cliente vê primeiro.

O cartão cancelado continua a ser preferido por razões ambientais e de apresentação, mas na prática rasga-se durante o transporte ou na última milha.

É exatamente nisso que trabalhamos na Item Products: [componentes de papel](#) que reforçam a caixa para que produtos como o {{hero_product}} cheguem em melhor estado.

Se este não for o seu departamento, pode indicar-me a pessoa certa?

Com os melhores cumprimentos,

Subject	Showcasing paper-based components at Packaging Innovations

Hi {{first_name}},

I'm excited to let you know that we'll be exhibiting at Packaging Innovations Birmingham on 11-12 February (Stand P109, right by the main entrance) - and we'd love for you to drop by.

We'll have sample packs of our new Eco-Range of paper-based packaging components for boxes available.

The range is a paper-first alternative to plastic handles, locks, and reinforcements, made from FSC-certified paper or 100% recycled fibre and fully recyclable in the paper stream. It includes:

- Eco-Handles - strong, reliable carrying
- Eco-Locks - secure, reusable closure
- Eco-Handholds - prevent tearing around carry holes

If you'd like to see the range in person, we'd be delighted to show you.

Best regards,

Subject	A new paper-first approach to packaging components

Hi {{first_name}},

Packaging is changing fast, and many brands now demand packaging to be 100% paper.

That’s why our new Eco-Range uses FSC-certified paper or 100% recycled fibre to replace plastic handles, locks, and reinforcements.

Our offerings:

- Durable Paper Handles: Eco-Handles offer strong, ergonomic solutions for retail and industrial applications.
- Secure Closures: Eco-Locks enable easy box reuse with recyclable paper connecting clips.
- Reinforced Handholds: Eco-Handholds strengthen carry holes to avoid tearing and seal them to block dust and debris.

It’s a practical step toward fully paper packaging, built for today’s sustainability standards.

If you and your colleagues at {{company_name}} would like to take a look, just reply and I’ll arrange a sample pack.

Subject	How to maintain functionality in plastic-free packaging

Hi {{first_name}},

With our Eco-Range products, we've reimagedined what sustainable packaging can achieve for {{company_name}}.

Our innovative design geometry combines strength with practicality, solving everyday challenges such as:

- Lifting heavy-weight cartons
- Preventing box tearing
- Maintaining box strength through multiple uses

Each component is made from fully kerbside recyclable paper materials and helps brands meet recognised standards under the UK Plastic Pact and EPR frameworks.

It's packaging engineered for strength, simplicity, and genuine sustainability. Check out the range [here](#).

Would a sample pack be helpful for you or the team to review?

Subject	Sustainable alternatives without the compromise

Hi {{first_name}},

“I’m guessing this is very expensive then?”

“Yeah but how strong can it really be?”

These are common questions we get when introducing our new paper-based Eco-Range [\[take a look here\]](#).

However, after extensive product development, you don’t have to compromise with:

- Eco-Sidewinder - capable of weights >50kg
- Eco-Handhold - adding 20kg to the strength of carry holes

All components are made for scale and cost-efficiency, so the sustainability upgrade won’t blow {{company_name}}’s budget.

If you’re curious to see how they perform, just let me know where to send them.

Regards,
Joe Cheevers
Sales Manager | Item Products

Subject	{{first_name}}, sustainable packaging solution for {{company_name}}

Hi {{first_name}},

Are warehouses at {{company_name}} spending heavily on tape and new cartons?
What if your team could reuse boxes multiple times without tape or damage?

That is exactly what Box Latch Pro does. It is a simple clip that:

- Closes cartons securely without tape
- Keeps boxes intact for multiple reuse cycles
- Cuts waste while improving safety and speed

The Result?

Lower packaging costs and a measurable step toward sustainability.

If you agree that this can solve {{company_name}}'s warehousing problems,
Just reply "yes" and I'll take care of the rest.

Best,

Email 2:

To	 Person  Person  Person

Subject	{{first_name}}, reducing hidden costs at {{company_name}}

Hi {{first_name}},

Many managers I speak with share the same challenges you likely face at {{company_name}}:

- Rising spend on tape and cartons
- Damaged boxes after every use
- Time lost cutting and re-taping return cartons
- Safety concerns from knives and tape dispensers

Replacing tape with Latch Box Pro helped operations save money, speed up processes, and hit sustainability goals without changing existing workflows.

If this sounds familiar, let me send over a few samples so your team can try it out. Just reply "yes", and I will arrange it.

Best,

Email 3:

To	 Person  Person  Person
Cc	 Person
Bcc	 Person
Subject	{{first_name}}, Box Latch Pro saved them time and money

Hi {{first_name}},

I thought you might find this relevant.

VF Corporation, a global apparel company, faced the same problems most warehouses do - soaring tape costs, wasted cartons, and safety issues from cutters.

After switching to Box Latch Pro, they reported:

- Over 1 million meters of tape eliminated annually
- Boxes reused multiple times
- Faster inspections and repacking with fewer stoppages
- Safer handling without knives or tape dispensers

The best part?

All this was achieved just by replacing the tape with Latch Box Pro - a reusable box closure that lets you reopen boxes multiple times without using tape.

Bcc	 Person
Subject	{{first_name}}, find out how Nike and VF cut packaging costs

Hi {{first_name}},

Do you find your team at {{company_name}} going through tape and replacement cardboard boxes faster than you'd like? Many warehouses are forced to re-tape boxes every time they're opened - which adds cost, waste, and slows packing down.

Box Latch Pro is a closure that allows you to reopen boxes multiple times without using tape. Brands like Nike and VF (North Face, Vans, Timberland) have successfully used it to reduce costs, meet sustainability goals, and streamline packing processes.

It helps cut tape expenses by up to 75%, extends box life from around 10 to 40 uses, and speeds up packing and unpacking.

If you'd like to explore what this looks like in practice, just let me know and I will send some samples to test for yourself.

Best,

Email 4B:

To	 Person  Person  Person
Cc	 Person
Bcc	 Person
Subject	{{first_name}}, quick question about your warehouse packaging

Hi {{first_name}},

Quick question - when boxes are reopened in your warehouse, are they usually taped back up and eventually thrown away? Most teams do this by default, even though there are easier (and cheaper) ways.

Box Latch Pro is a closure that allows you to reopen boxes multiple times without using tape. Brands like Nike and VF (North Face, Vans, Timberland) use it to reduce packaging cost, extend box life, and speed up packing.

It can:

- Cut tape usage by up to 75%
- Extend box life from ~10 uses to 30-40+
- Reduce damage from tearing and re-taping

If you'd like to try it, I'd be happy to send over some samples to test in your workflow.

Hey there, Ciaran here from Item Products - thought a quick voice note might be easier than another typed message.

The reason I've been popping up is we've developed a paper strap handle called Eco-Sidewinder. It can carry well over 60kg, no plastic, fully recyclable with the cardboard. It's been a really good fix for furniture brands who want the sustainability and premium feel of corrugate, but who keep running into tear-outs and handling issues at the customer's door.

Wondered if it was worth a 10-minute chat about how it might work for your products.

Happy to drop some samples in the post first if that's easier.

Either way, cheers.

Message 1 (sent immediately after connection accepted)**Version A:**

Curious if you've run into this mattress packaging dilemma {{first_name}}

Either you deliver in a box that can rip during transit, or a heavy plastic bag that customers increasingly see as unsustainable.

How are you approaching this?

Version B:

Something I've been curious about {{first_name}} –

I keep hearing mattress brands face this trade-off: corrugated boxes can tear during delivery, but plastic bags avoid that while creating sustainability concerns.

Is that something you've seen?
